

Create pmrep to import metadata sources from a database (ODBC data source)

Hello,

Would it be possible to create new pmrep command in order to import metadata sources from a database (ODBC data source) in PowerCenter ?

Currently, it is only possible to do it manually in PowerCenter Designer, using the " import tables" wizard :
Powercenter Designer > Sources > Import From Database > select ODBC Data source and username, owner and password.

The pmrep command "ObjectImport" only imports objects from an XML file.

Kind regards

David
