

Ability to see multiple inferred business terms

It appears that in 10.4.1 if I have multiple inferred business terms on a field/column asset that I can only see one at a time at the table level. When I reject an inferred term at the table level and refresh or go off the screen and come back it shows the next one that was inferred.

I can get to the multiple inferred terms only after drilling down on the field and then drilling into the business term field. It would be nice (and save multiple clicks) if we could see all inferred business terms at once so they can be accepted/rejected at one time at the table level. Would be a nice feature with the "accepted" data domains as well.

At a minimum it would be nice if we could see at the table column level that there are multiple inferred business terms (similar to data domains) so that we knew to drill in and accept/reject them all.
